

Greystone Chiropractic's space was designed to promote the ease of providing excellent patient care in an open and friendly environment. The design opened the room's volume with trusses, allowing light to infuse the space through windows and clerestory windows and using lower walls to maintain privacy between patients. For the exterior and interior plan, we created a modern take on the traditional medical office with bold, clean lines that enhance, rather than compete with, the traditional finishes.

PROJECT DETAILS

- 4,552 sf
- \$1,100,000
- Open and welcoming
- Natural light infuses the space
